LAB DOCUMENTATION

Experiment 3: Implement IAM for Secure Access

AWS Identity and Access Management — Users, Groups, Roles & Access Testing

Student Name	*Aditya Kumar Singh*
Reg. No.	*RA2311003010916*

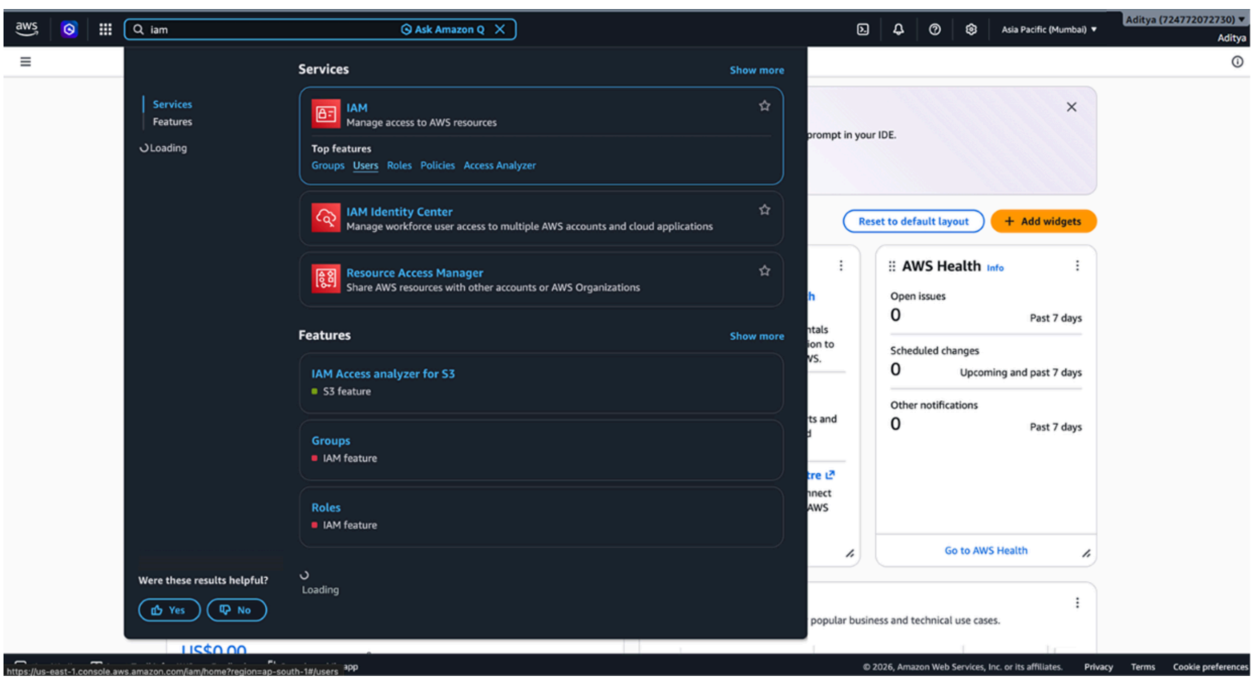
Objective

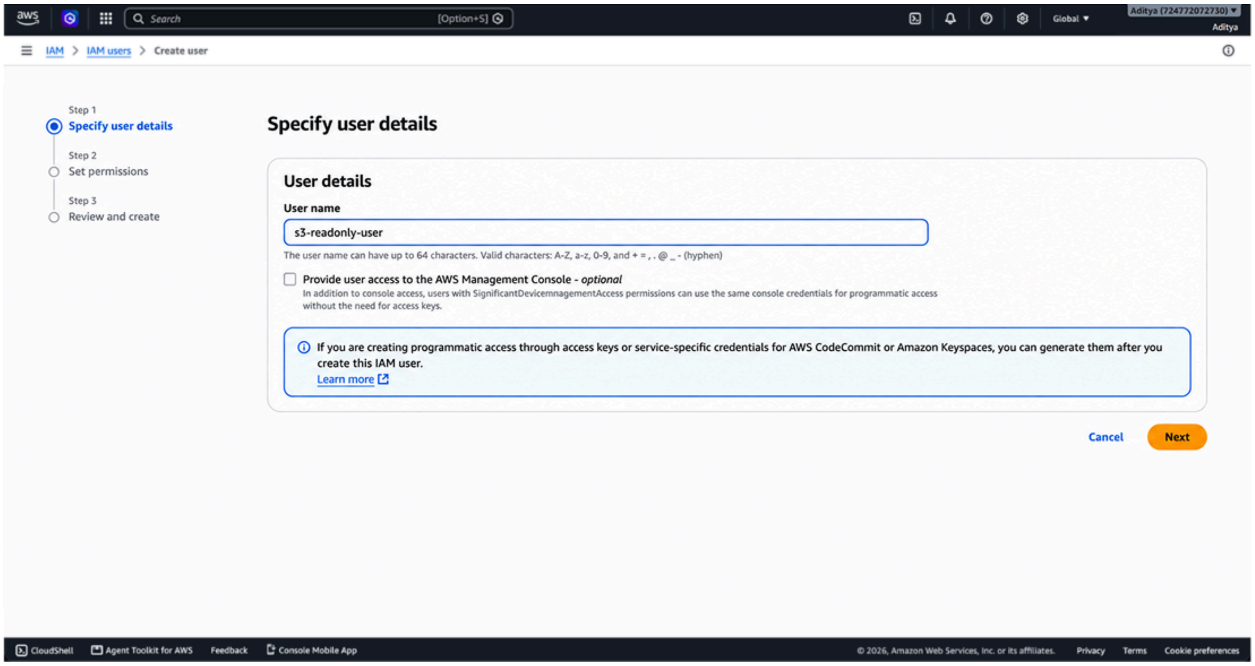
- Create an IAM user, group, and role
- Assign permissions and test access

Task 1: Create an IAM User

WHAT WE DID

Went to IAM Dashboard > Users > Add User, provided username "s3-readonly-user", selected Programmatic Access, and attached the AmazonS3ReadOnlyAccess policy.

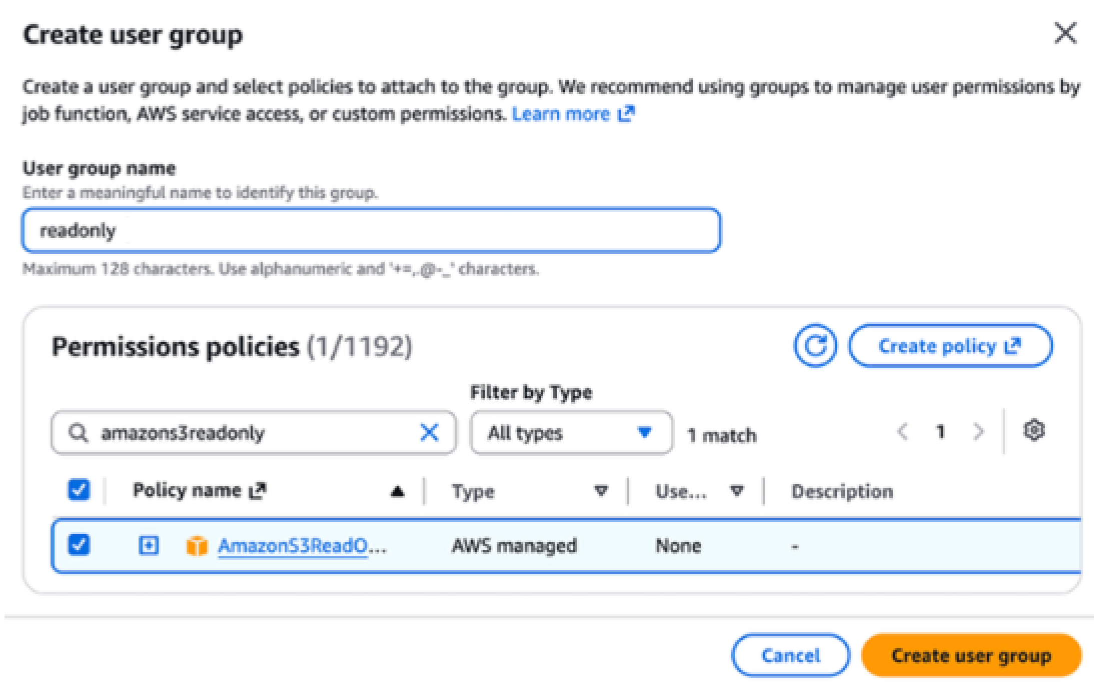


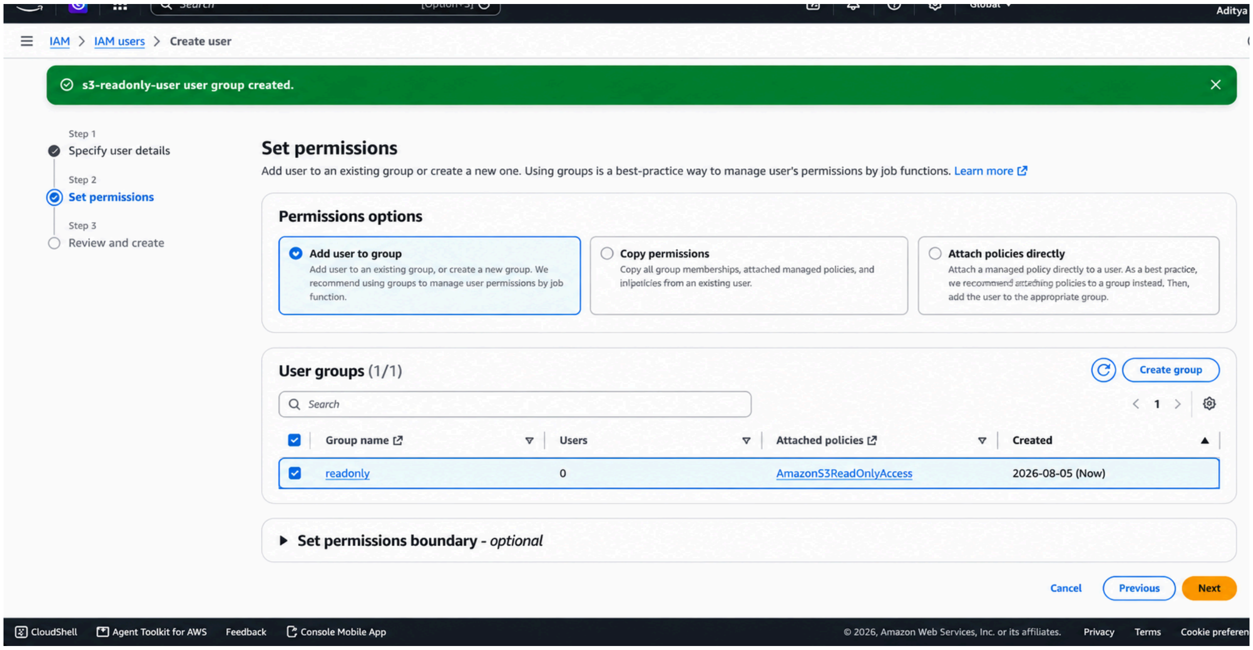


Task 2: Create an IAM Group

WHAT WE DID

Navigated to Groups > Create Group, created "S3-ReadOnly-Group", added the user, and assigned the AmazonS3ReadOnlyAccess policy.





Aditya
IAM > IAM users > Create user
s3-readonly-user user group created.
Step 1
Specify user details
Step 2
Set permissions
Step 3
Review and create
Set permissions
Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. Learn more
Permissions options
Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
Copy permissions
Copy all group memberships, attached managed policies, and inlpolicies from an existing user.
Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.
