Objective:

- Create an S3 bucket and upload, manage, and retrieve files.

Prerequisites:

- AWS account access.

Steps:

1. Create an S3 Bucket:

- Go to the **S3 Dashboard**.
- Click **Create Bucket** and provide a unique bucket name.
- Select a region and configure options (e.g., block public access).

2. Upload Files:

- Select the bucket and click **Upload**.
- Add files and set permissions.

3. Manage Files:

- Enable **versioning** for the bucket.
- Set up lifecycle rules to transition objects to Glacier.

4. Retrieve Files:

- Use the AWS CLI to download files:
- `aws s3 cp s3://<bucket-name>/<file-name> ./local-file`
