

Experiment 3

Implement IAM for Secure Access

Objective:

- Create an IAM user, group, and role.
- Assign permissions and test access.

Prerequisites:

- AWS account access.

Steps:

1. Create an IAM User:

- Go to the **IAM Dashboard > Users > Add User**.
- Provide a username and select access type (e.g., Programmatic Access).
- Attach policies (e.g., AmazonS3ReadOnlyAccess).

2. Create an IAM Group:

- Navigate to **Groups > Create Group**.
- Add users to the group and assign policies.

3. Test Access:

- Use the provided access keys with the AWS CLI:
- `aws configure`
- `aws s3 ls`

4. Create and Assign an IAM Role:

- Go to **Roles > Create Role**.
- Attach a policy (e.g., AmazonEC2FullAccess).
- Assign the role to an EC2 instance.
